

G&G Shipping, Bulkhead Replacement and Seawall Stabilization Ft. Lauderdale, Florida

Renovation

Design-build a 250 linear ft. steel-sheet pile bulkhead, with a 40 ft. wide concrete apron with asphalt surface, to stabilize a failing seawall, plus a new heavy lift crane pad and mooring support structures. A total of 34 tires were hung with chains along the bulkhead face to provide berthing protection for ships and barges

The client provided the necessary design loads and operational requirements for the project.

Completed
March 2013
